

Reason Behind Using This Scheduling Algorithm

Scheduling Algorithm:- FCFS (First Come First Server)

- Objective:
- Criteria:- Arrival Time
 - Tie Breaker:- Process ID
- Type: Non-Preemptive

Example 1:

Process	Arrival Time (AT)	Burst Time (BT)
P1	0	30
P2	0	5
P3	0	5

- Ready Queue
 - At Time = 0 : P1, P2 , P3 Are In The Ready Queue
- Gantt Chart
- Calculations For
 - Completion Time
 - Turn Around Time
 - Waiting Time
 - Average TAT
 - Average WT
 - Response Time For P1, P2 and P3:-
 - P1 =
 - P2 =
 - P3 =
 - P4 =
 - P5 =
 - P6 =
 - Calculating Scheduling Length:-
 $\max(CT) - \max(AT) =$

- Throughput:-

$$\frac{\text{No. Of Process}}{\text{Unit Time}} =$$

// Note: Response Time = Waiting Time In FCFS

☞

Example 2:-

Process	Arrival Time	Burst Time
P1	0	4
P2	1	2
P3	2	3
P4	3	5
P5	4	6
P6	5	1

Solution:

Process	Arrival Time	Burst Time	Completion Time	Turnaround Time	Waiting Time
P1	0	4			
P2	1	2			
P3	2	3			
P4	3	5			
P5	4	6			
P6	5	1			

- Ready Queue
 - At Time = 0 :
- Gantt Chart

- Calculations For
 - Completion Time
 - Turn Around Time
 - Waiting Time
 - Average TAT
 - Average WT
 - Response Time For P1, P2 and P3:-
 - P1 =
 - P2 =
 - P3 =
 - P4 =
 - P5 =
 - P6 =
 - Calculating Scheduling Length:-
 $\max(CT) - \max(AT) =$
 - Throughput:-

$$\frac{\text{No. Of Process}}{\text{Unit Time}} =$$

∩

Any Special Question Or Another Example Upto You

Process	Arrival Time	Burst Time	Completion Time	Turnaround Time	Waiting Time
P1	4	4			
P2	8	2			
P3	6	3			
P4	5	3			
P5	2	1			
P6	7	7			

- Ready Queue

- At Time = 0 :
- Gantt Chart
- Calculations For
 - Completion Time
 - Turn Around Time
 - Waiting Time
 - Average TAT
 - Average WT
 - Response Time For P1, P2 and P3:-
 - P1 =
 - P2 =
 - P3 =
 - P4 =
 - P5 =
 - P6 =
 - Calculating Scheduling Length:-
 $\max(CT) - \max(AT) =$
 - Throughput:-

$$\frac{\text{No. Of Process}}{\text{Unit Time}} =$$
